Summary

Senior Full-Stack Engineer, 8+ years building backend services and running them in production, the last five on AWS.
That meant a real-time food-delivery order service and driver-location pipeline for around 100K daily active users, then an LLM translation platform with multi-provider fallback and incident-triage agents.
The stack is ECS Fargate, Lambda, SQS, DynamoDB and Terraform on AWS, React and Next.js in front, Aurora MySQL and Redis underneath.
I take a feature from design through deployment and keep running it once it is live, instrumented so I hear about failures before users do.

Work Experience

OnTheGoSystems (WPML)

Remote

Senior Software Engineer — *Dec 2024 - Sep 2026*

- Built the LLM engine behind PTC's translation platform (Bedrock, OpenAI, Gemini) and its OCR provider chain, with fallback chains, JSON repair and Langfuse tracing.
- Added a translation-memory RAG on pgvector with an HNSW index, extending the BM25 and LLM matching so near-duplicate past translations are reused.
- Built a TypeScript MCP server giving agents constrained access to the Rails app's logs and database.
- Built the incident-triage platform, an MCP server over CloudWatch logs, affected users and release code, worked by investigator, critic and decider agents that file the ticket.
- Built credit billing for the translation platform, charged per word translated rather than per LLM request, with a prepaid balance as one of six billing kinds.
- Built a queue-depth autoscaler, four Node.js Lambdas reading queue depth from MySQL with task state in DynamoDB, sized for a 100K jobs/hour peak against a ~5K baseline.
- Moved production from EC2 to ECS Fargate, then owned the platform, its Terraform and the GitLab CI pipelines (build, e2e, SAST, deploy), and brought it into ISO 27001.

Dailymealz

Riyadh, Saudi Arabia

Senior Software Engineer — *Dec 2021 - Dec 2024*

- Built the driver-location pipeline, Express API events into TimescaleDB and geofencing, hits queued in Redis for a worker writing MongoDB fulfilment events and refreshing the order cache.
- Extracted fulfilment from the Laravel monolith into a single Express service, the two talking over SQS events behind a REST contract.
- Built the real-time order service for around 100K daily active users in Node.js and TypeScript on Socket.IO, with hot order state in Redis written behind to MySQL.
- Moved the order service from JavaScript to TypeScript after a producer and consumer drifted on a payload, so the mismatch fails at compile time.
- Cut mean time to resolve by 30% with Datadog, OpenTelemetry and alarms, where detection had taken hours before.
- Led a team of 6 on the driver app and built the React Native kitchen, driver and admin apps alongside the Next.js web app.

Nformacy

Cairo, Egypt

Full-Stack Developer — *Oct 2020 - Dec 2021*

- Led a team of 5 building Rails and React features from requirements to deployment, and moved the web apps to a SaaS model.
- Built mentor calendar booking in Rails, with Zoom, ClickUp and calendar integrations driven by webhooks.
- Mentored the team in XP, TDD and thin vertical slices, wrote the BDD tests and ran the CI/CD pipelines.

DevSquads

Cairo, Egypt

Software Engineer — *Jan 2018 - Oct 2020*

- Built products across React Native, Rails, Java Spring and React in XP teams, with TDD, pairing and thin vertical slices.

Skills

Languages	TypeScript, JavaScript, Node.js, Ruby, PHP, Java, SQL
Backend & APIs	Express, Socket.IO, REST, SQS event-driven services, Redis queues, Delayed Job
AI & LLM	AWS Bedrock, OpenAI, Gemini, Claude SDK agents, MCP, tool calling, agentic workflows, RAG, pgvector (HNSW), Langfuse
Cloud & Infrastructure	AWS (ECS Fargate, Fargate Spot, Lambda, SQS, DynamoDB, CloudWatch), Terraform, Docker, GitLab CI
Databases	MySQL, Aurora MySQL, PostgreSQL (pgvector), TimescaleDB, MongoDB, Redis, DynamoDB, ClickHouse
Testing & Observability	TDD, BDD, Datadog, OpenTelemetry, Langfuse
Frontend	React, Next.js, React Native
Spoken Languages	English, Arabic (native)
Working knowledge	Go, Kafka, Kubernetes, NestJS, RabbitMQ

Open Source Projects

ecs-drain-scaler *2026*

- **AWS (ECS, SQS), Terraform, Go**. Queue-depth autoscaler: SQS backlog drives Fargate scale; a drain protocol keeps scale-in from killing a task mid-job.

handoff-mcp-server *2026*

- **TypeScript, MCP**. Persists a coding agent's task context as a validated briefing, restored next session.

Education

B.Sc. Geophysics, Cairo University *2012 - 2016*
