Summary

Senior Full-Stack Engineer, 8+ years building and running production software in Node.js, React, Laravel and Rails.
That meant the real-time order service, driver-location pipeline and React delivery-map dashboard for a product with around 100K daily active users, then the LLM engine and incident-triage platform behind PTC's translation platform.
I use Node.js/Express, GraphQL and React/Next.js on AWS ECS Fargate, Lambda and SQS, with MySQL, MongoDB and Redis.
I led teams of 6 at Dailymealz and 5 at Nformacy, and mentored colleagues in XP, TDD and thin vertical slices.

Work Experience

OnTheGoSystems (WPML)

Remote · Hong Kong hours

Senior Software Engineer — *Dec 2024 - Sep 2026*

- Built a queue-depth autoscaler, four Node.js Lambdas reading queue depth from MySQL with task state in DynamoDB, scaling each queue type through a 100K jobs/hour peak. Other products adopted the pattern.
- Built the incident-triage platform with the team lead: Claude Agent SDK agents (investigator, critic, decider) file tickets through an MCP server over CloudWatch, Prometheus, GitLab and a read-only DB user.
- Made the case for ECS over EKS, moved production from EC2 to ECS Fargate and owned it afterwards, with Terraform across environments, GitLab CI (build, e2e, SAST, deploy) and ISO 27001 controls.
- Built credit billing charged per word translated, not per LLM request, with a prepaid balance as one of six billing kinds.
- Built the scalable LLM engine behind PTC's translation platform: Bedrock, OpenAI and Gemini behind fallback chains, with evaluation, output validation, Langfuse tracing and an OCR provider chain.

Dailymealz

Riyadh, Saudi Arabia

Senior Software Engineer — *Dec 2021 - Dec 2024*

- Built the real-time order service on Node.js and Socket.IO for ~100K DAU, hot order state in Redis written behind to MySQL.
- Built the payment system, with Apple Pay and other wallets, and business-heavy features in the Laravel monolith.
- Moved the order service to TypeScript after producer and consumer drifted on a payload, so mismatches fail at compile time.
- Built the driver-location pipeline and geofencing, Express API events into TimescaleDB, then a Redis queue to MongoDB and the order cache, and real-time driver tracking over Socket.IO.
- Built the React delivery-map dashboard and the Next.js web ordering product, both on Apollo GraphQL.
- Extracted fulfilment from the Laravel monolith into one Express service over SQS behind a REST contract, instead of a full event-driven rewrite that would have frozen feature work.
- Added Datadog, OpenTelemetry and alarms where detection had taken hours, and cut mean time to resolve by 30%.
- Built features across the React Native driver, customer and kitchen apps, and led a team of 6 on the driver app.

Nformacy

Cairo, Egypt

Full-Stack Developer — *Oct 2020 - Dec 2021*

- Led a team of 5 on the Rails web apps, moved them to a SaaS model and built the React translation-management dashboard.
- Mentored the team in XP, TDD and thin vertical slices, wrote the BDD tests and ran the CI/CD pipelines.

DevSquads

Cairo, Egypt · US Pacific hours

Software Engineer — *Jan 2018 - Oct 2020*

- Built client products in Ruby on Rails, React Native and React in XP teams, with TDD, pairing and thin vertical slices.
- Built Shapa's health-task recommender, Bluetooth Low Energy link to its scale, and analytics dashboards for health specialists.

Skills

Languages	TypeScript, JavaScript, Node.js, SQL, Ruby, PHP
Backend & APIs	Express, Laravel, Socket.IO, REST, GraphQL, Event-Driven Architecture, SQS, Redis
Frontend	React, Next.js, React Native
Databases	MySQL, PostgreSQL (pgvector), MongoDB, Redis, TimescaleDB, DynamoDB, ClickHouse
Cloud & Infrastructure	AWS (ECS Fargate, Lambda, SQS, ALB, ECR, VPC, S3), Terraform, Docker, GitLab CI/CD
Testing & Observability	TDD, BDD, E2E, Jest, Datadog, OpenTelemetry, Prometheus, CloudWatch, Langfuse
AI & LLM	Claude Code, Claude Agent SDK, MCP, CrewAI, AWS Bedrock, OpenAI, Gemini, RAG
Currently learning	Go, Kafka, Kubernetes
Spoken Languages	English, Arabic (native)

Open Source Projects

flotilla-stream *2026*

- **Go, Kubernetes (GKE), Terraform, DuckDB**. Building a real-time backbone for a delivery system, where simulated drivers stream GPS, geofence crossings raise events, and orders go to the nearest free driver without double assignment.

ecs-drain-scaler *2026*

- **AWS (ECS, SQS), Terraform, Go**. SQS backlog drives Fargate scale; a drain protocol keeps scale-in from killing a task mid-job.

handoff-mcp-server *2026*

- **TypeScript, MCP**. Persists a coding agent's task context as a validated briefing, restored next session.

Education

B.Sc. Geophysics, Cairo University *2012 - 2016*
