Summary

Senior Full-Stack Engineer with nearly 9 years building and running production software.

At Dailymealz I built the real-time order service and driver-location pipeline for around 100K daily active users, and at OnTheGoSystems the LLM translation engine and, with the team lead, the incident-triage platform.

I use Node.js/TypeScript, Socket.IO, React/Next.js and React Native on AWS ECS Fargate, Lambda and SQS.

I led teams of 6 at Dailymealz and 5 at Nformacy, owned their technical architecture and mentored them in TDD.

Work Experience

OnTheGoSystems (WPML)

Remote · Hong Kong hours

Senior Software Engineer — *Dec 2024 - Sep 2026*

- Built the LLM engine for PTC, the AI translation platform, with fallback chains across Bedrock, OpenAI and Gemini, retries with backoff on provider rate limits, evaluation, output validation and Langfuse tracing.
- Built the incident-triage platform with the team lead. Its Claude Agent SDK agents read production through a TypeScript MCP server and a read-only database user, and handled over 200 bugs, incidents and support requests in the first month.
- Built the queue-depth autoscaler on Node.js Lambdas, scaling each queue type every 10 seconds and draining workers so scale-in, deploys and Spot reclaim did not kill jobs. Queues peaked at 100K jobs/hour, and other products adopted it.
- Made the case for ECS over EKS as cheaper and easier to adopt, with an AWS cost estimate from current and expected load. Moved production from EC2 to ECS Fargate and owned it with Terraform, on-call, runbooks, postmortems and ISO 27001 controls.
- Built the pay-as-you-go credit engine that billed per word rather than per LLM request. Closed a 7 ms stale-read race in the credit check, which had silently paused 20,067 translations, with a synchronous word-count refresh before the estimate.

Dailymealz

Riyadh, Saudi Arabia

Senior Software Engineer — *Dec 2021 - Dec 2024*

- Built the Node.js order service for ∼100K daily active users, with hot order state in Redis written behind to PostgreSQL.
- Built the driver-location pipeline and geofencing service: an Express API wrote positions to TimescaleDB, geofence events went through a BullMQ queue to a worker that updated MongoDB and the order cache, and Socket.IO tracked drivers live.
- Built the payment system in the monolith and integrated Apple Pay and other wallets into the mobile apps.
- Built the BullMQ fulfilment queues on Redis with idempotent consumers, so order, geofence and payment events were applied once under retries with backoff, and added payment-queue alarms and a dead-letter queue for re-applying failed jobs.
- Moved fulfilment into the order service, fed by SQS order events and same-day orders over REST. Kept the monolith as system of record and rejected a full event-driven rewrite, which would have frozen feature work and left two systems inconsistent.
- Built the React delivery-map dashboard and the Next.js web ordering product, both on Apollo GraphQL.
- Led a team of 6 on the React Native driver app, owned its technical architecture, planned scope with stakeholders and mentored the team in TDD and spec-driven design. Also built features in the customer and kitchen apps.

Nformacy

Cairo, Egypt

Full-Stack Developer — *Oct 2020 - Dec 2021*

- Led a team of 5, moved the web apps to a SaaS model and built the React translation-management dashboard.
- Built the BDD test suite and the CI/CD pipelines, and mentored the team in TDD and spec-driven design.

DevSquads

Cairo, Egypt · US Pacific hours

Software Engineer — *Dec 2017 - Oct 2020*

- Built client products in React Native and React in XP teams, with TDD, pairing and thin vertical slices.
- Built Shapa's health-task recommender, Bluetooth Low Energy link to its scale, and analytics dashboards for health specialists.

Skills

Languages	TypeScript, JavaScript, Ruby, Go, SQL
Backend & APIs	Node.js, Express, Socket.IO, REST, OpenAPI/Swagger, Apollo GraphQL, Prisma
Messaging & Queues	BullMQ, SQS, EventBridge, Step Functions, event-driven architecture
Frontend	React, Next.js, React Native
Databases	PostgreSQL, MongoDB, Redis, TimescaleDB, DynamoDB
Cloud & Infrastructure	AWS (ECS Fargate, Lambda, SQS, ALB, S3), Terraform, Docker, GitLab CI/CD
Testing & Observability	TDD, BDD, E2E, Jest, k6, JMeter, Datadog, OpenTelemetry, Prometheus, CloudWatch
AI & LLM	Claude Code, Claude Agent SDK, MCP, CrewAI, Bedrock, OpenAI, Gemini, Langfuse, RAG, evals
Currently learning	Kafka, Kubernetes
Spoken Languages	English, Arabic (native)

Side Projects

Flotilla-stream *2026*

- **Go, Kubernetes (GKE), Terraform, DuckDB**. Building a real-time backbone for a delivery system, designed so that simulated drivers stream GPS, geofence crossings raise events, and orders go to the nearest free driver without double assignment.

ECS Drain Scaler *2026*

- **AWS (ECS, SQS), Terraform, Go**. SQS backlog drives Fargate scale; a drain protocol keeps scale-in from killing a task mid-job.

Handoff MCP Server *2026*

- **TypeScript, MCP**. Persists a coding agent's task context as a briefing, restored next session.

Education

B.Sc. Geophysics, Cairo University *2012 - 2016*
